Although O.S.H.A. recommends that procedures involving blood and other potentially infectious materials be performed in such a manner as to minimize splashing, spraying, and splattering, it is often difficult to completely prevent the generation of droplets in the healthcare setting. Recognizing this, and the fact that the acute care setting can be a hazardous work environment, DeRoyal steps forward to present this line of Facial Fluid Protection Products to minimize exposure to pathogens from waste fluid. These products offer a unique combination of innovation, quality, value, and comfort for clinicians for whom personal protective equipment is a vital part of self-care as they care for others.
